MBRRACE-UK – Mothers and Babies: Reducing Risk through Audit and Confidential Enquiries

It has recently been announced that the **MBRRACE-UK** collaboration, led by the NPEU, will continue the work investigating maternal deaths, stillbirths and neonatal deaths carried out in the past by CMACE, including the Confidential Enquiry into Maternal Deaths.

Future plans include extending investigations to include near-miss events and other serious morbidities, and this will link directly with the work of UKOSS.

The MBRRACE-UK team has begun evaluating the data relating to maternal and perinatal deaths which occurred during 2011 and early 2012 and which were notified by Units via the MPMN web-based portal system. During the remainder of 2012 the team will be working to improve data collection and will work closely with Units to ensure that all maternal deaths, stillbirths and neonatal deaths continue to be notified to ensure Confidential Enquiries can proceed.

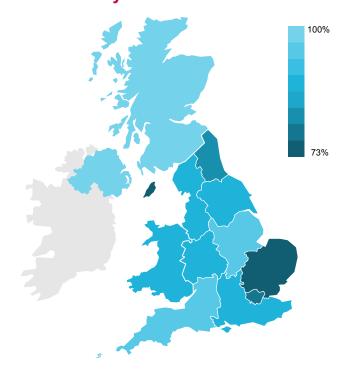

During 2012 Units should continue to upload notifications of maternal and perinatal deaths to the MPMN Portal. Any units which have not yet registered to use the portal should do so immediately by emailing: enquries@mpmn.nhs.uk

More information coming soon and on the website www.npeu.ox.ac.uk/mbrrace-uk

UKOSS Regional Card Return Rates Feb 2012 - May 2012

THIS MONTH

- New study - Massive Transfusion in Major Obstetric Haemorrhage

- Severe Maternal Sepsis & HELLP update

Thanks to the following hospitals who have returned cards for the last three months:

Aberdeen Maternity Hospital Airedale General Hospital Altnagalvin Area Hospital

Antrim Hospital Arrowe Park Hospital **Ayrshire Maternity Unit**

Barnet and Chase Farm Hospitals NHS Trust

Basildon Hospital

Bassetlaw District General Hospital

Birmingham City Hospital Birmingham Heartlands Hospital Birmingham Women's Hospital **Borders General Hospital Bradford Royal Infirmary** Bronglais Hospital Caithness General Hospital

Causeway Hospital

Chesterfield & North Derbyshire Royal Hospital

City Hospitals Sunderland NHS Trust Countess of Chester Hospital Craigavon Area Hospital Croydon University Hospital **Cumberland Infirmary** Daisy Hill Hospital Darent Valley Hospital Derriford Hospital

Dewsbury and District Hospital Diana Princess of Wales Hospital **Doncaster Royal Infirmary Dorset County Hospital** Dr Gray's Hospital

Dumfries & Galloway Royal Infirmary

Ealing Hospital

Eastbourne District General Hospital

Erne Hospital Forth Valley Royal Hospital Friarage Hospital Frimley Park Hospital Furness General Hospital George Eliot Hospital

Epsom General Hospital

Glan Clwyd District General Hospital

Good Hope Hospital Harrogate District Hospital Hereford County Hospital Hillingdon Hospital Hinchingbrooke Hospital Homerton University Hospital

Hull Royal Infirmary Ipswich Hospital

James Cook University Hospital

James Paget Hospital Jersey General Hospital John Radcliffe Hospital Kettering General Hospital King's College Hospital King's Mill Hospital

Lancashire Women and Newborn Centre

Leeds General Infirmary Leicester Royal Infirmary Leighton Hospital Lincoln County Hospital Lister Hospital

Macclesfield District General Hospital

Mater Infirmorum Hospital Medway Maritime Hospital Milton Keynes General Hospital

Nevill Hall Hospital Newham General Hospital Ninewells Hospital & Medical School

Nobles Hospital

Princess Anne Hospital

Queen Charlotte's and Chelsea Hospital

Royal Free Hospital Tameside General Hospital The Tunbridge Wells Hospital

Returned all three cards. Returned two cards. Returned one card.

New Study – Massive Transfusion in Major Obstetric Haemorrhage

Major obstetric haemorrhage (MOH), resulting in massive transfusion (MT), accounts for 80% of all maternal morbidity¹. As there is no universally accepted definition for MOH, its incidence varies depending on how it is defined. The most critical feature of MOH is the development of disseminated intravascular coagulopathy (DIC) which, unlike DIC that follows major haemorrhage in trauma or surgery, occurs quite early on in the course of the haemorrhage. The situation is further complicated by the fact that during massive haemorrhage volume resuscitation with fluid and blood can lead to dilutional coagulopathy².

In recent years, availability of rapid new diagnostic testing and the introduction of new haemostatic resuscitation strategies have challenged our thinking on optimal transfusion support for patients with massive haemorrhage. Much of the drive for new approaches to management of bleeding has come from studies of patients with trauma. Although studies from bleeding trauma patients have some limitations, they have raised some important questions on the optimum management of patients with massive bleeding. Further investigation is required to enable the generation of evidence-based clinical guidance, as well as the identification of new avenues for research including, among others, interventional clinical trials. The aim of this study is to investigate what proportion of women who receive MT receive plasma transfusions and whether there is any correlation between the use of additional blood components and clinical outcomes.

Surveillance Period: July 2012 – June 2013

Case definition: All pregnant women of 20 weeks gestation or more identified as having >/= 8 units of RBC transfusion (excluding cell salvage) within a 24hr period

Funding: National Health Service Blood and Transplant

Investigators: Laura Green, NHS Blood and Transplant & Barts and the London Hospital, Simon Stanworth, NHS Blood and Transplant, Oxford, Peter Collins, Cardiff University, Marian Knight, NPEU.

Case report summary for current studies up until 11 June 2012

Disorder	Actual number of reported cases	Data collection forms returned (%)	Number of confirmed cases (%)	Expected number of confirmed cases
Adrenal Tumours	16	12 (75)	5 (42)	23
Amniotic Fluid Embolism*	159	153 (96)	108 (71)	88
Cardiac Arrest in Pregnancy (CAPS)	49	31 (63)	17 (55)	28
Gastric Banding in Pregnancy	102	61 (60)	37 (61)	77
HELLP Syndrome*	229	166 (72)	122 (73)	380
Myeloproliferative Disorders	68	50 (74)	32 (64)	121
Pituitary Tumours	85	68 (80)	40 (59)	112
Severe Maternal Sepsis*	443	308 (70)	245 (80)	316
Stage 5 Chronic Kidney Disease	6	2 (33)	1 (50)	9

HELLP Syndrome & Severe Maternal Sepsis studies

The HELLP syndrome and Severe Maternal Sepsis studies have both ended and we have had a good response to both studies. Please could we now ask all UKOSS reporters to check that they have reported all eligible cases for their maternity units that occurred between the 01st of June 2011 and the 31st May 2012.

Meet a UKOSS Reporter

Charlotte McClymont, the UKOSS/UKNeS Programme Manager interviews Helen Whapshott.

Helen trained to be a midwife at the University of Hertfordshire, being based at Watford General, and has been the labour ward manager at Frimley Park Hospital in Surrey for two years.

CM: What are the main duties / responsibilities of your job?

HW: The general day to day management of a labour ward delivering about 5300 babies a year, which is increasing year on year.

Provide clinical support to all staff.

Involvement in risk management and review and development of evidence based guidelines.

CM: What other jobs / occupations have you had in the past?

HW: I spent 10 years as a nurse, working mainly in A & E and trauma before training to be a midwife and wondered why I had never done it before. I also spent two years as a police officer but we don't like to mention that.

CM: Do you have any hobbies?

HW: As a family we have a 38 ft yacht which is really my husband's hobby but of necessity I have to go along too. He needs a cook and bottlewasher! It is also a good opportunity to do nothing but enjoy a glass of wine on a quiet evening at anchor especially on a summer evening. I enjoy embroidery and reading when I have time and am chair person of the local scout group. I quite enjoy spending time with my children too.

CM: What do you like best about your job?

HW: Providing a good standard of care to women and their families, working with a brilliant team of midwives and medics and still being able to do what I trained for.

Chocolate Box

Chocolates this month go to **Sandra Newbold** from St Peter's Hospital, Chertsey and **Rowan Wilson** from St James' University Hospital for efficient return of cards and forms.

Many thanks to you both!

CM: What do you think is particularly good about your maternity unit?

HW: Team work and a supportive environment for all.

CM: What aspects of being a UKOSS reporter do you most enjoy?

HW: It enables me to identify higher risk cases and look at whether we are providing care, screening and management in an appropriate way.

CM: How does being a UKOSS reporter add to your role at work?

HW: It increases my awareness of current issues and enables sharing of information through teaching and other learning opportunities such as audit.

CM: Would you recommend becoming a UKOSS reporter to other clinicians and why?

HW: Yes, it enables you to share cases and contribute to findings on specific problems which are unusual. By doing this and with the analysis by UKOSS we are contributing to the knowledge around these subjects and improving the care we give to women.

Helen Whapshott
